

Tzedakah Box Assembly Instructions

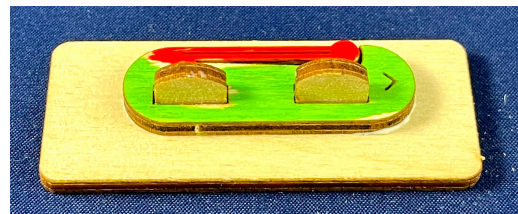

1. Carefully remove all the pieces from the wood card.

2. Insert tabs G, round side up, into the slots on piece F.

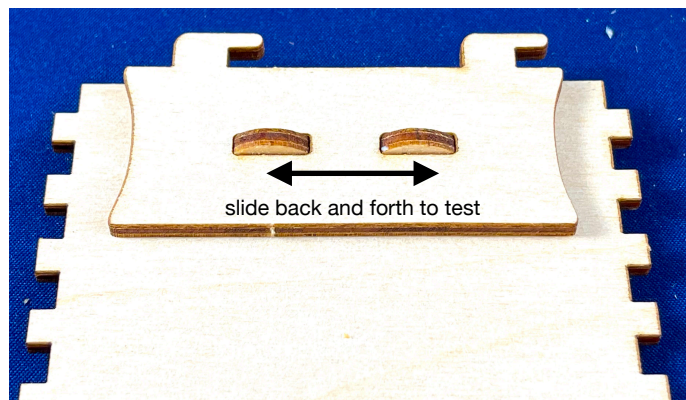

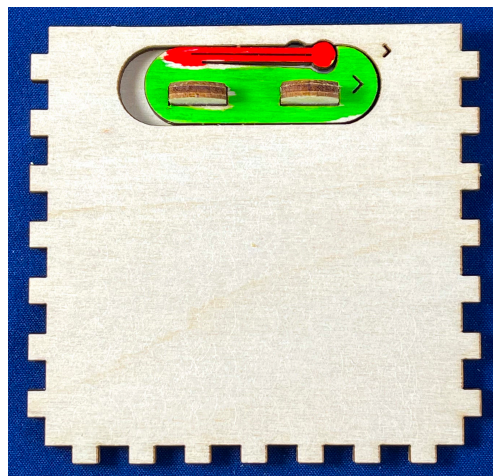

3. Hold piece H arrow facing to your left, and the straight edge at the bottom. Add a small amount of glue to the surfaces shaded in green. Do not get glue to the surface shaded in red.

4. Flip the piece over so the arrow is now pointing to your right, and place the slots over tab G. Press down until piece H is glued firmly to piece F.

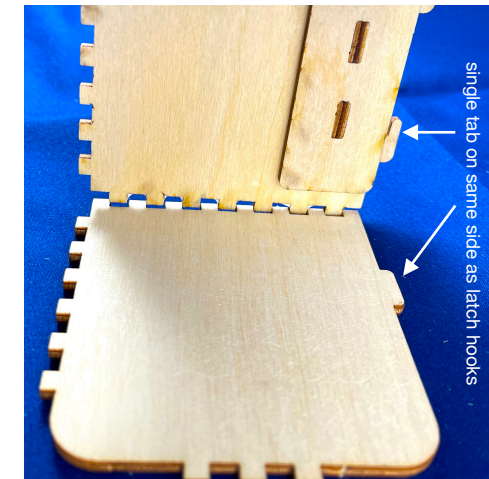

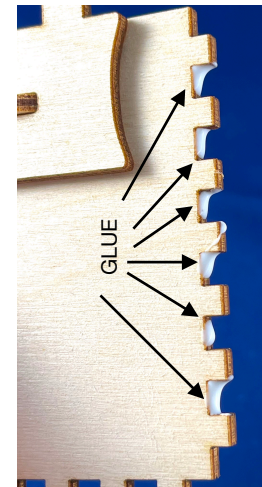

5. Take piece D, hold it so the tabs are at the bottom and sides, the smooth edge is towards the top. Place it over piece H so that H is showing through the cutout in piece D. The arrow on piece H should point in the same direction as the arrow on piece D.

6. Put a small amount of glue on the green shaded surface of piece H, DO NOT get any glue onto the red shaded surface. Fit piece E with the hooks facing to your right, over tabs G. Press firmly and hold in place for 1-2 minutes to give the glue a chance to dry. Once your glue has had a few minutes to dry, check to make sure your latch slides back and forth smoothly.

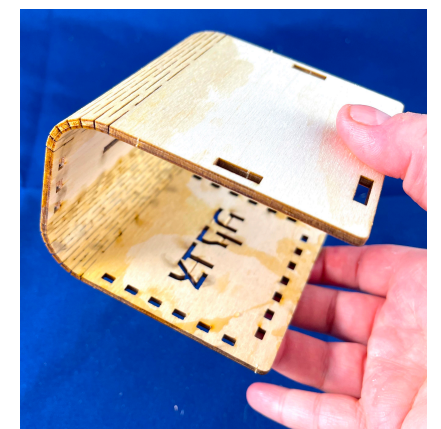

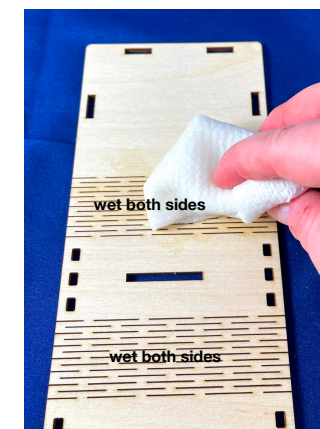

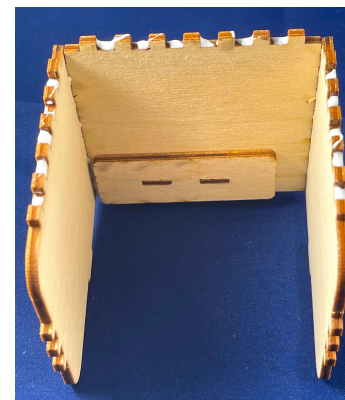

7. Put a small amount of glue in between the tabs on both sides of piece D. Interlock the tabs of piece D with the tabs on the left edge of piece C so that the two pieces form one corner of the box. Repeat by interlocking the tabs of piece B with the other side of piece D. Make sure in both cases that the side with only 1 tab is pointing in the same direction as the hooks on your latch. You may need to press down on pieces B or C to get them to interlock all the way with piece D. (Pictures at the top right of this page)

9. Add a small amount of glue in between all remaining tabs on all the sides of the box.

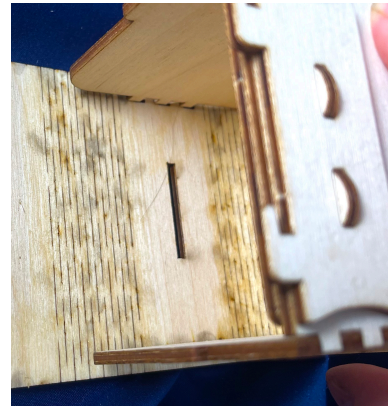

10. Wet down a folded piece of paper towel with tap water. Rub water on both sides of the flexible sections of piece A. This will help the wood to bend without breaking. Carefully bend the two short ends of piece A towards each other. Add more water if the sides do not bend easily enough.

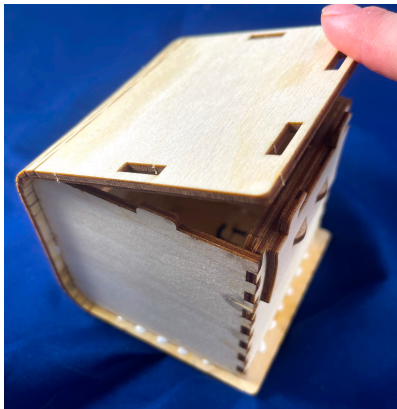

11. Fit the tabs of the 3 attached sides (B, C, D) into the tabs around the word Tzedakah. Make sure that Tzedakah is upside down, and the open end of B/C/D is facing towards the flexible hinge of piece A.

12. Add a small amount of glue in-between the tabs on the side that has 3 tabs.

13. Fit the side of the box with the slot on top of the tabs you just glued. Press down firmly and make sure the tabs are all the way into the holes.

14. Fold the final side of the box into position. There is NO GLUE used for this side.

15. Line up the latch hooks with the slots, and then slide the latch into place so the final side does not pop back up.
